Data engineer with experience operating payroll-critical SQL Server and Azure systems, including CDC, data quality, release automation, and recovery. Earlier work spans business analytics and product analysis; independent projects extend into Python APIs, ingestion, and applied AI.

EXPERIENCE

Data Engineer | ExponentHR | Dallas, TX | Jul 2024 - Present

- Reengineered SQL Server CDC/SSIS pipelines from full-table reloads to incremental merge-upserts, reducing runtime from 30 minutes to under 8 minutes and compute cost by approximately 67%.
- Built Azure DevOps automation for database provisioning in Always-On Availability Groups, removing about one hour of manual work per request through rerunnable restore, security, and CDC setup.
- Owned Azure DevOps CI/CD and cross-team release coordination, shortening deployment cycles from approximately three months to 14 days.
- Built a control-table-driven data validation framework and monitoring for missed, stuck, and incomplete ETL runs; documented CDC schema-change and recovery procedures.

Data Engineer | Missouri S&T | Rolla, MO | Aug 2023 - Jul 2024

- Built Python NLP pipelines over 10,000+ visitor reviews using spaCy, NLTK, VADER, and RoBERTa; contributed to peer-reviewed sentiment-analysis research published in 2025.
- Implemented service-specific anomaly alert thresholds and migrated workloads to AKS autoscaling; reported outcomes included fewer non-actionable alerts and \$3,200 lower monthly Azure spend.

Earlier analytics and product experience

C2FO, Product Intern (Jun - Aug 2023): SQL analysis of financial transactions and user behavior. udaan.com, BI Analyst (Sep 2020 - Mar 2021): demand forecasting and Power BI. Zomato, Business Analyst (Mar 2018 - Sep 2020): competitor analytics and internal search.

SELECTED INDEPENDENT PROJECTS

JobScout | Python, Flask, SQLite, React

- Built an ingestion workflow for company career feeds with ATS-specific adapters, date and salary normalization, bounded retries, and isolated source failures. Source: github.com/narendranathe/job-scout

AutoApply AI | FastAPI, PostgreSQL/pgvector, React

- Built a personal document-intelligence system connecting page capture, retrieval from career evidence, provider fallback, and user-reviewed drafts. Public-launch gates are documented in the repository. Source: github.com/narendranathe/autoapply-ai

SKILLS

Production data work: SQL, T-SQL, SQL Server, CDC, SSIS, Azure DevOps, data modeling, data validation, Power BI. Projects and research: Python, FastAPI, Flask, PostgreSQL, Kafka, Spark, Delta Lake, Docker, AKS, GitHub Actions, retrieval workflows.

EDUCATION AND CREDENTIALS

M.S., Information Science & Technology | Missouri S&T | Dec 2023 | GPA 4.0/4.0

Microsoft Certified: Fabric Data Engineer Associate (DP-700) | Certified Scrum Product Owner

Publication: An Examination of Sentiment Analysis as a Tool for Gathering Visitor Feedback, 2025.
